

FINN'S BEACH CLUB

The newest Beach Club to open in Canggu marries traditional style with a chic design.

If the design brief was to maximise views and capture cooling ocean breezes, then one would agree that the new Finn's Beach Club in Berawa, Canggu hits the mark. A striking bamboo structure that is certainly not at odds with its environment, Finn's construction incorporates as many natural materials as possible in an effort to support sustainable building practices and maintain a local island ambiance.

With the predominant use of bamboo, ergonomics blend with traditional architectural styles to form a sturdy yet chic structure that remains in sync with its natural surrounds. Open air, pavilion style with organic curves and high, thatched roof domes, the club's elevated ceilings welcome the sea breeze and eliminate enclosing exterior walls, whilst clusters of fine woven rattan light "chandeliers" in various shapes and sizes form eye-catching centrepieces nestled beneath the roof.

Subtle elevations are then seen from the sandy pool deck to the bar and dining areas, ensuring each guest gets a guaranteed ocean view from every location. Meanwhile, unpolished terrazzo flooring, white island stone, rich bamboo and solid wooden bar tops are topped off with natural earthy tones, dark cushions and day beds to capture a chic yet simple décor.
